

Beaufort County Students Achieve Measurable Gains in Reading and Math with High-Impact Tutoring

In the 2024–2025 school year, Beaufort County School District (SC) partnered with Catapult Learning to deliver in-person, **high-impact tutoring in math and literacy for grades K–12**. The district, which serves more than 20,000 students, invested in research-based instruction designed to accelerate learning.

Like many districts nationwide, leaders needed solutions to close learning gaps in foundational literacy and math skills. They sought an evidence-based tutoring model that delivered measurable results while complementing classroom instruction.

The Solution

Catapult Learning collaborated with district and school leaders to design a flexible program that fit each school's unique environment. Key elements included:

Scheduling: Integrated tutoring into the school day without disrupting core instruction.

Instructional Design: Structured small-group, in-person sessions to boost engagement and consistency.

Targeted Support: Tailored instruction to each student's skill gaps using assessment data.

This approach allowed schools to implement tutoring in ways that worked best for their staff, schedules, and students.
